

BUSINESS PLAN FOR YOUR BUSINESS

Image from Pixabay

What is a business plan and why is it useful?

A Business Plan is a document in which a business opportunity, or a business already under way, is identified, described and analysed, examining its technical, economic and financial feasibility. The Plan develops all of the procedures and strategies necessary in order to convert the business opportunity into an actual business project. It is an necessary tool in order to start up a business project, independently of the size of the project and/or of the amount of business experience of the entrepreneur.

What is the purpose of a Business Plan?

The purpose of a Business Plan is to identify, describe and analyse a business opportunity and/or a business already under way, examining its technical, economic and financial feasibility.

Moreover, it should serve as a business card for introducing the business to others such as banks, investors, institutions, public bodies or any other agent involved, when it comes time to seek cooperation or financial support of any kind.

Why should I prepare a Business Plan?

- Because it provides a global analysis of the business
- Because it forces us to analyse whether the business project is feasible or not
- Because it forces us to make a strategic reflection on the business
- Because it will help to manage the business
- Because it serves as a business card introducing the company idea

Contents of a Business Plan

1. Executive summary

The executive summary outlines your business proposal. Although it is the last section to be written, it goes on the first page of the business plan. It will be read by people unfamiliar with your business, so avoid writing extended information. The executive summary highlights the most important points and should sum up.

- Your product or service and its advantages.
- Your opportunity in the market.
- Your management team.
- Your track record to date.
- Financial projections.
- Funding requirements and expected returns.

When deciding whether to back a start-up, bank managers and investors often make provisional judgements based on the executive summary.

2. The business

Explain the background to your business idea, including:

- The length of time you have been developing the business idea in its present form.
- Work carried out to date.
- Any related experience you have.
- The proposed ownership structure of the business.

Explain, in plain simple language, what your product or service is. Make it clear how:

- it will stand out as different from other products or services
 - your customers will gain through buying your product or service
 - the business can be developed to meet customers' changing needs in the future
- It is important to cover any disadvantages or weak points you feel the business may have. Be honest about these facts, it inspires confidence.

Explain any key features of the industry (e.g. special regulations, effective cartels or major changes in technology).

3. Markets and competitors

Focus on the segments of the market you plan to target. For example, local customers or a particular age group.

- Indicate how large each market segment is and whether it is growing or declining.
- Show the important trends and the reasons behind them.
- Outline the key characteristics of buyers in each segment (e.g. age, sex or income).
- Mention customers you have already lined up and any sales you have already achieved.

What are the competing products and who supplies them?

- List the advantages and disadvantages of all your competitors and their products.
- Explain why people will desert established competitors and buy from you instead.
- Show you understand your competitors' reaction to losing business and demonstrate how you will respond to it.

Unless there is a viable market and you know how you are going to beat the competition, your business will be vulnerable. You must show you have done the market research needed to justify what you say in the plan.

4. Sales and marketing

This section is crucial. It often gives a good indication of the business' chances of success. How will your product or service meet your customers' specific needs? How will you position your product?

This is where you show how your price, quality, response time and after-sales service will compare with competitors. Mention minimum order figures, if appropriate.

How will you sell to customers?

For example, by phone, through your website, face-to-face or through an agent.

List the key sales points for your product or service.

Show how long you predict each sale will take. Many new businesses underestimate the time involved in winning each order. In year one you may spend up to 80 per cent of your time making contacts and selling.

Will you be able to make repeat sales? If not, it will be hard to build up volume.

Who will your first customers be?

Show which customers have expressed an interest or promised to buy from you and the sales they represent.

How will you identify potential customers? Unless you can demonstrate that you have a clearly defined pool of potential customers, starting your business is likely to be a struggle.

How will you promote your product?

For example, using advertising, PR, direct mail or via email and a website.

What contribution to profit will each part of your business make?

Most businesses need more than one product, more than one type of customer and more than one distribution channel.

Look at each in turn. Examine your likely sales, gross profit margins and costs.

Identify where you expect to make your profits and where there may be scope to increase either margins or sales.

Services and intangible products (e.g. computer software) are more difficult to market. Start-ups in these areas must pay special attention to marketing in their business plans.

5. Management

People reading the business plan need to be given an idea of why they should have faith in the management of your start-up.

Outline the management skills within your team.

Define each management role and who will fill it.

Show your strengths and outline how you will cope with any weaknesses.

Describe the background and experience of each team member.

Clarify how you intend to cover the key areas of production, sales, marketing, finance and administration.

Management information systems and procedures should be outlined. For example, management accounts, sales, stock control and quality control.

Show how many 'mentors' and other supporters you will have access to.

How committed are you?

Banks and any other potential investors will want to be sure you are committed to the business. Show how much time and money each of the management team will contribute, and what your salaries and benefits will be.

6. Operations

Explain what facilities the business will have and how it will deliver the product or service to the customer.

Show the pros and cons of the location.

Indicate the facilities you will need to start (eg equipment and machinery). Some start-up businesses only need a desk and a phone.

Consider any potential limits to production capacity. If you are going to manufacture or distribute products, show how and where you are going to warehouse them and for how long.

Provide a list of employee roles you need to fill and the skills required to fill them.

7. Financial forecasts

Your financial forecasts translate what you have already said about your business into numbers.

A realistic sales forecast forms the basis for all your other figures.

Break the total sales figure down into its components (e.g. different types of products or sales to different types of buyer).

Your cashflow forecast shows how much money you expect to be flowing into and out of your bank account and when. You must show that your business will have access to enough money to survive.

Demonstrate that you have considered the key factors affecting cashflow. e.g. level and timing of sales revenue, wages.

Show when there will be more money coming in than going out ('cash-positive').

Your profit and loss (P&L) forecast gives a clear indication of how the business will move forward.

Summarise the annual P&L forecast for each of the first two or three years of trading.

Calculate the turnover you need to break even:

$$€ \text{ Breakeven} = € \frac{€ \text{ Fixed costs}}{\% \text{ Gross margin}} * 100$$

If your gross margin is 25 per cent, your sales must be four times as large as fixed costs to break even.

Compare the breakeven level of sales with the sales you are forecasting.

If you are launching a larger start-up, you will also need projected balance sheets. These will show you the financial state of your business on day one and at year end, perhaps for the first two or three years.

Do not get too protective about your forecasts. You may need to revise them. For every forecast, list all your key assumptions (e.g. prices, sales volume, timing). Small business advisers at banks and your local business support organisation will often help you put together your forecasts free of charge.

8. Financial requirements

The cashflow forecast will show how much finance the business needs. Your assessment of the risks will determine whether or not you need to arrange contingency financing.

Say how much finance you will want, when and in what forms. For example, you might want a fixed-interest loan and an overdraft facility.

State what the finance will be used for.

Show how much will be for buying equipment and how much for working capital (financing stock and debtors).

Confirm that you will be able to afford it.

9. Assessing the risks

Look at the business plan and isolate areas where something could go wrong (e.g. if your main supplier closes down).

What you would do if it actually happens?

Consider a range of what-if scenarios (e.g. what happens to your cashflow if sales are 20 per cent lower or 15 per cent higher than forecast). If there are serious risks:

you can arrange contingency funding to cover the finance you may need

you may decide that the business is too risky and abandon the whole project. Assessing risk will help you minimise problems and help build up your credibility with any investor or bank.

10. Appendices

Detailed financial forecasts (monthly sales, monthly cashflow, P&L) should usually be put in an appendix.

Include a detailed list of assumptions. For example, the profit margin on each product, debtor collection period, creditor payment period, stock turn, interest and exchange rates, equipment purchases.

You may want to give other relevant information.

Detailed CVs of key personnel (essential if you are seeking outside funding).

Market research data.

Product literature or technical specs.

Names of target customers.

A list of external data sources used in your research will add credibility to the information.

11. Presenting the plan

The more solid information you can gather for your own use, the better the business plan will be. But a banker or other outsider will not have time to read through all the details.

Keep your business plan short.

Most business plans are too long. Focus on what the reader needs to know.

Make it professional.

Put a cover on the business plan and give it a title.

Include a contents page.

Test it.

Re-read it yourself. Would reading your plan give an outsider a good feel for your business and a grasp of the key issues?

Show the plan to friends and expert advisers and ask them for comments.
